EXP NO: 2 STUDY OF DIFFERENT TYPES OF NETWORK CABLES

Different types of network cables are used to connect devices and transmit data in a network. The main types are:

1. Unshielded Twisted Pair (UTP) cable
   - Contains twisted pair and copper wires without shielding
   - Categories includes cat 3 (10 Mbps), cat 5 (100 Mbps) and cat 5e (1 Gbps)

2. Shielded Twisted pair (STP) cable
   - Similar to UTP but with a protective to shield to reduce noise
   - Supports cat 6/ cat 6a with speeds up to 10 Gbps.

3. Screened shielded Twisted Pair (SSTP) cable
   - Provides extra shielding for maximum protection against interference
   - Supports cat 7 with speeds upto 10 Gbps.

4. Coaxial Cable
   - Consists of a central coppers conductor, insulation shielding and an outer cover.
   - Commonly used for cable TV, broadband internet and CCTV systems.

5. Fibre optic cable
   - Uses light signals to transmit data through glass or plastic fibres.
   - Widely used in internet backbone networks telecommunications, and data centres.

Result :-

Different types of cables are studied successfully
